

Technology Survey

Benchmark evaluation of network strengths and areas of risk

Technology Survey / Network Evaluation / Strategic Assessment

The Technology Survey is a baseline questionnaire that delivers a quantitative, high-level perspective on your entire environment. Quick, yet thorough, the Technology Survey includes benchmarks and recommendations so you can pinpoint both the areas of greatest risk and opportunity for your specific system.

What it is:

The Technology Survey is a high-level benchmarks and standards evaluation of WAN, LAN, Wireless, Voice and Environmentals.

Conducted with key technical team members, the Technology Survey requires approx 2-4 hours answering key multiple-choice and open-ended questions.

An optional Security module is also available.

Who it's for:

Designed for Executives to gain a high-level understanding of the strengths and risks in their network environment.

Equips IT leaders with information they need to make strategic and financial business decisions related to remediation or capital project needs.

What you get:

You will receive a 50+ page report that includes a risk assessment for each network domain.

Includes an Executive Brief addressing your business use of technology.

Get benchmarking data to see where you stand compared to your peers.

Contains levels of criticality for each area and recommended next steps.
